

CADPak 2018 installation on Windows

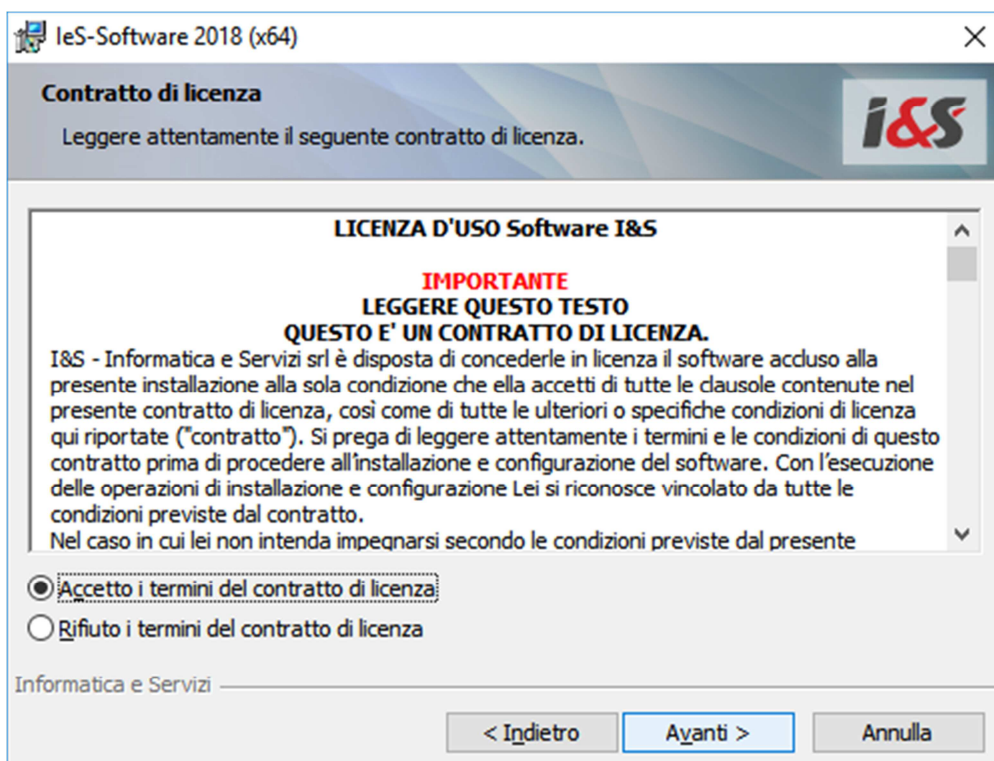

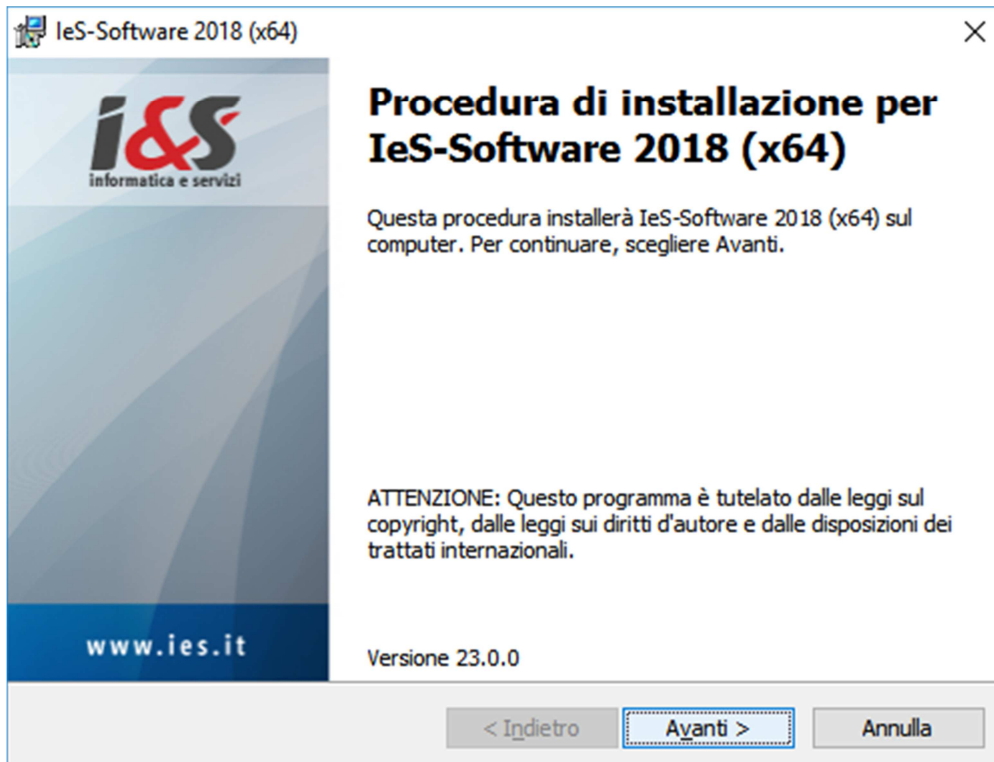

Initial splashscreen

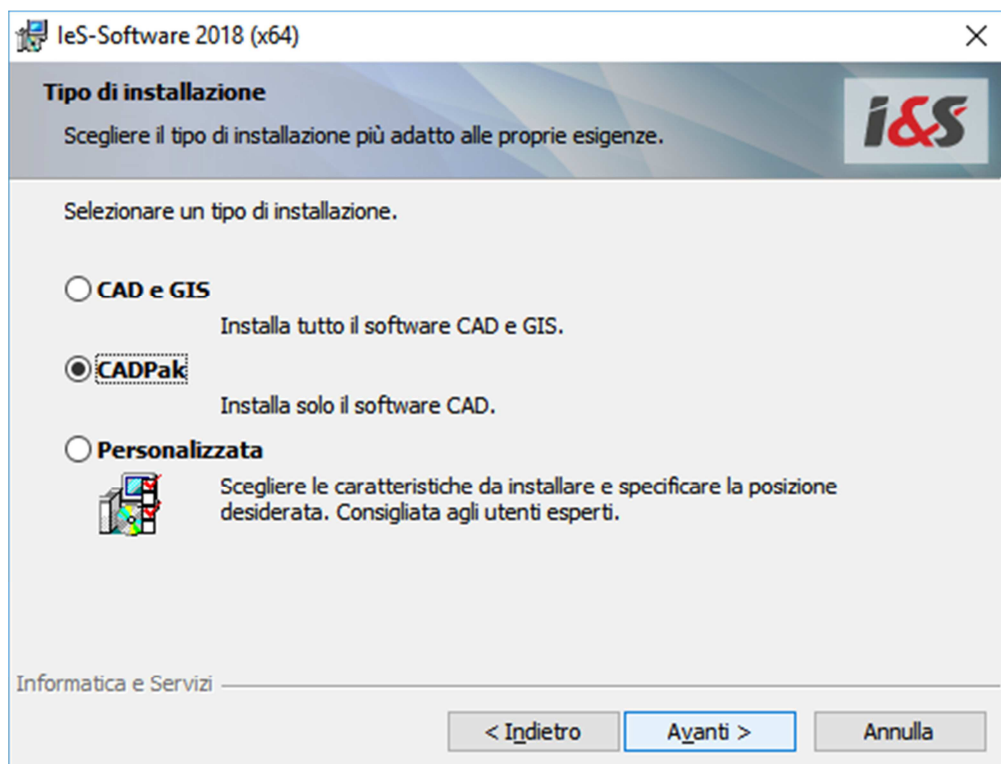

From the initial splashscreen launch the installation of the I&S software.

Installation

The CADPak installation is managed by a wizard.

The following 4 pictures show the steps to be followed.

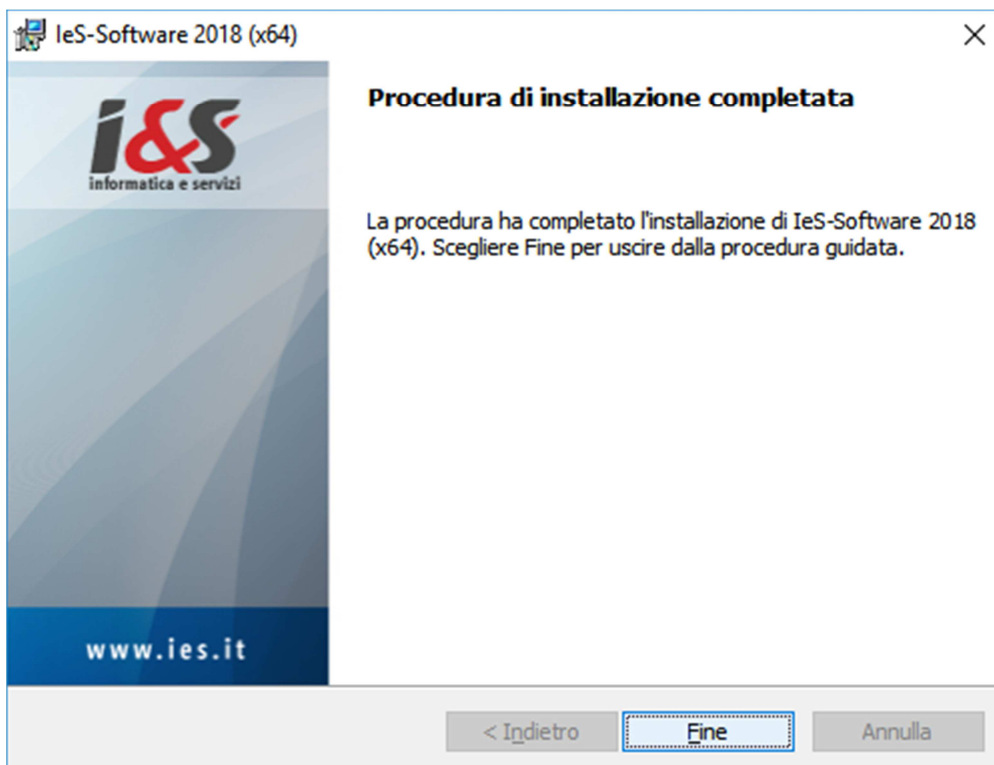

Then, by clicking on the button **Installa**, the I&S software installation starts.

A window will then notify that the installation is completed.

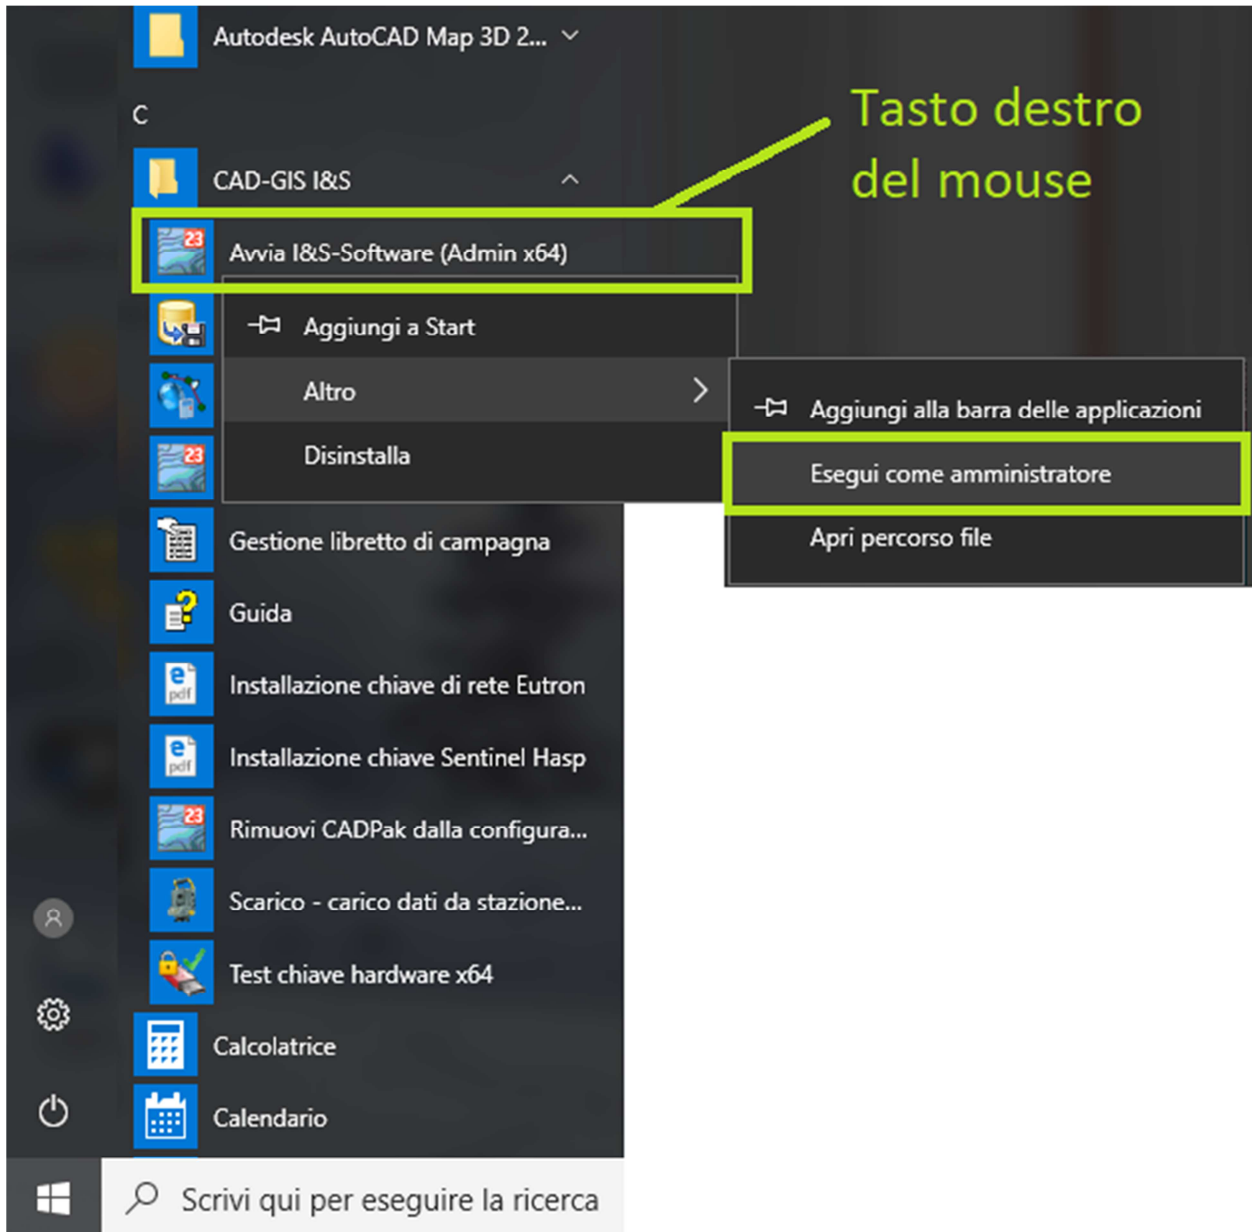

CADPak first run

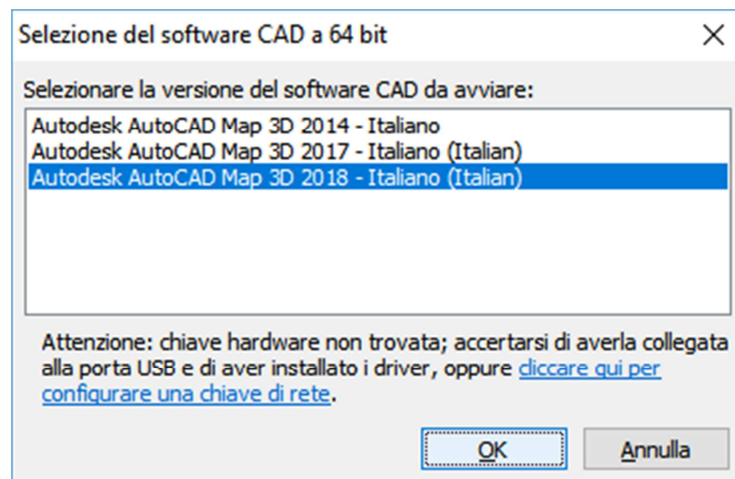

The first time you launch CADPak you have to launch it as an administrator (amministratore):

Windows Start Menu – CADPak – right mouse click on:

“Avvia I&S Software - Admin x64” – Esegui come amministratore.

In the following box, select the Autodesk product that you wish to combine to CADPak.

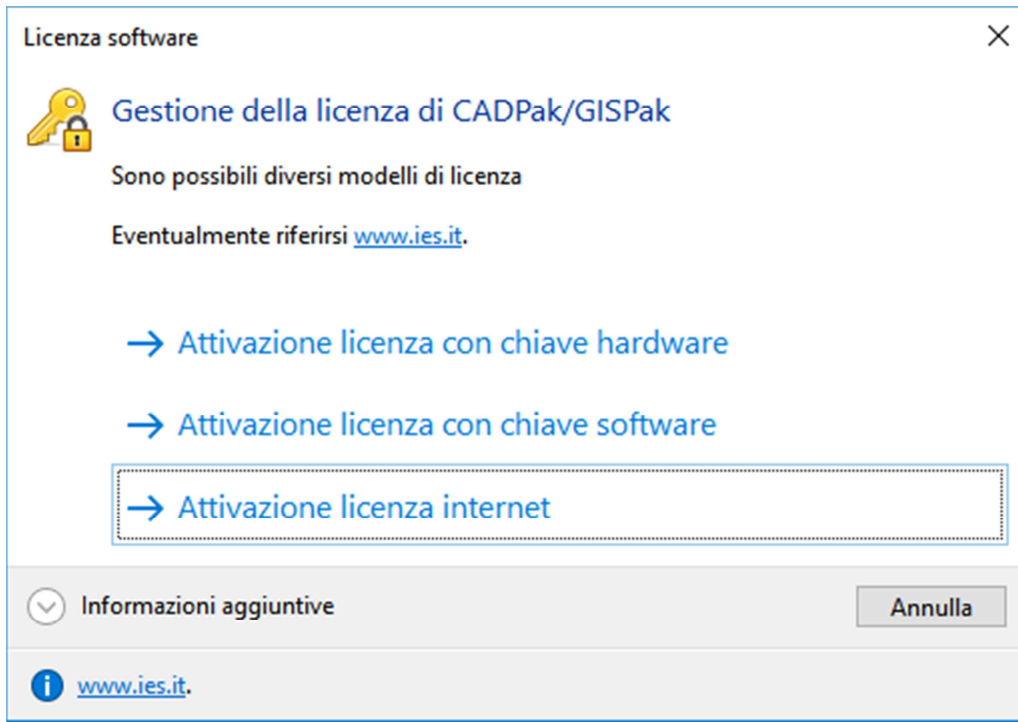

Only in the case you are using a CADPak network hardware key, you will have to configure it by clicking the link in blue and to specify the name of the server and the port where the license management service is installed.

Click on "Test..." and confirm to verify that the key is to be found correctly.

When launching the software it will be possible to activate the license. Select the purchased type and start the activation by following the instructions, which will appear in the following dialog boxes.

In the case you have a USB hardware key, you will have to install the driver (Eutron or Sentinel depending on the key model) from the DVD initial splashscreen.

In case of activation of the license an authentication box (login) will appear, in which you will have to enter the login credentials: username and password. These login credentials will be given from I&S when you buy the license.

It is possible to activate a license directly on line or with a license file. You have to ask I&S (per e-mail) for the license file and in the e-mail you will have to indicate the code shown in the "identification field". The button on the right of the identification field allows you to copy the code in the clipboard and then to paste it in the e-mail with the activation file request.

The screenshot shows a window titled "Login" with a blue header bar. The main area features a large circular icon of a person's silhouette. To the right, it says "POWERED BY" above the "i&S informatica e servizi" logo. Below this, there are two radio buttons for "Modalità": "Credenziali" (selected) and "Da file". There are two input fields: "Username" and "Password" (with an eye icon for visibility). At the bottom, there are "Cancel" and "Login" buttons.

The screenshot shows the same "Login" window, but now the "Da file" radio button is selected. The "Identificativo" field contains the code "539077e4-7c35-48c6-92b9-0a530bab5" and has a copy icon to its right. Below it is a "Seleziona File" field with a file selection icon. The "Username" and "Password" fields are no longer visible. The "Cancel" and "Login" buttons remain at the bottom.

MS Access Databases Engine or SQL Server Express installation

Initial splashscreen

In the 64 bit version some CADPak commands require the connection to a DB Access or to a SQL Server. From the initial splashscreen launch the installation of “MS Access Database Engine”.

Installation

Follow the wizard until the end of the installation.
After the installation is completed, restart the PC.

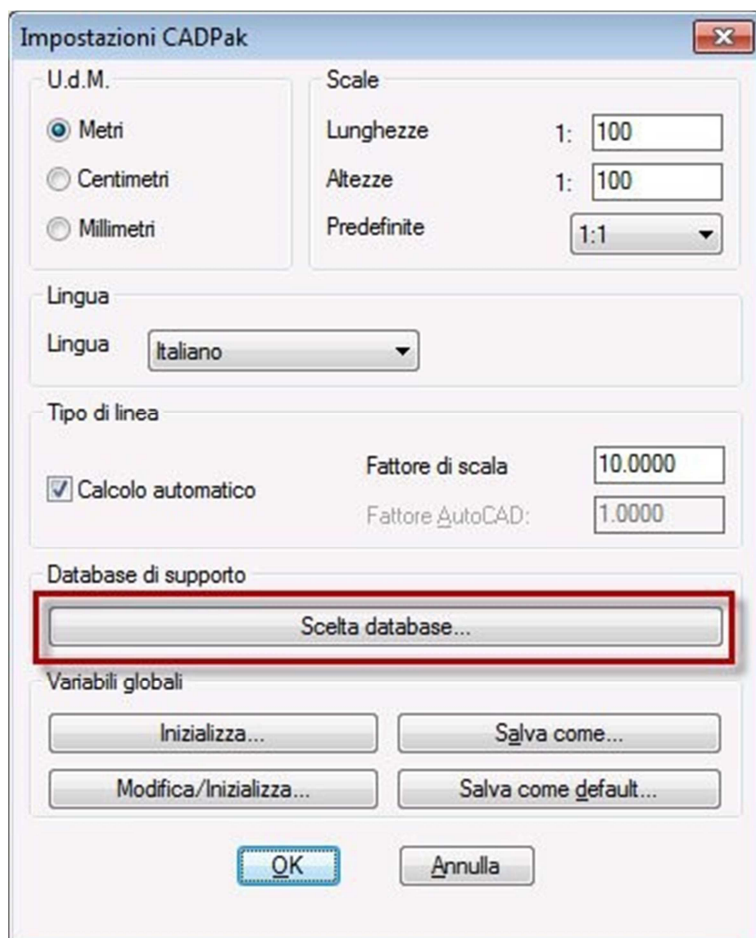

If SQL Server 2005 Express was installed, it is going to be necessary to install CADPak.

If it is not configured, when you start a command which requires the reading/writing on a database (i.e. MDB1) the following error box will appear.

CADPak configuration for using a DB in SQL Server Express

Launch the command *IMPOSTA*.

Click the button shown in the figure below.

Write in the dedicated field the following text string: `.\SQLEXPRESS` and click **Ok**.
